

WHITE RIVER VALLEY ELECTRIC COOPERATIVE

Your Touchstone Energy® Cooperative 

INTEGRATED VEGETATION MANAGEMENT PROGRAM

Our Integrated Vegetation Management Program helps balance the need for safe, reliable service by keeping our right-of-ways clear of trees and overgrown vegetation with respect for the natural environment.

PROGRAM GOALS

- Provide electric power to members safely.
- Protect the electric system and reduce power outages.
- Minimize negative impacts on the environment.
- Comply with federal, state, and local regulations.
- Work safely and efficiently.
- Foster positive working relationships with our communities.

WRVEC's Right-of-Way department is available throughout the process to respond to any questions or concerns you might have.

CALL BEFORE YOU DIG

Know what's below before you dig. A quick, free call to 811 gets your utility lines marked and helps protect you from injury, outages, and unexpected costs. They will mark your lines within three working days.

Call 811 or visit call811.com for more information.

TIPS FOR PLANTING

- Smaller trees should be 20 feet away from power lines.
- Medium trees need to be planted at least 35 feet away from lines.
- Large trees need to be planted at least 45 feet away from overhead lines.
- Trees planted too close to the lines will always be misshapen by unavoidable pruning of limbs to prevent interference with power lines.
